Smartloop

Introducing SmartLoop, the latest innovation from Smartlift designed to make bulk bag handling safer, faster, and more efficient. Engineered to attach to virtually any bulk bag, SmartLoop creates a simple and reliable lifting solution that enables independent handling without the need for a second operative. Inspired by the proven design of our Tunnel Lift Bag side tunnels, the SmartLoop system keeps the lifting points presented and accessible at all times, streamlining the loading and lifting process.

*Bulk Packaging
Made Simple*

Key Features about Smartloop:

-  **Suitable to attach to any bag type**
-  **Reinforced Stitching to make the loops stay upright**
-  **Manufactured with the same shape as the tunnel bag side tunnels, but requires less polypropylene to produce**
-  **Designed for independant handling (one operative)**
-  **Designed with safety in mind, helping to keep operatives out of harm's way during lifting operations.**

Sustainability and Environmental:

As a Carbon Neutral company, we are committed to continually reducing our environmental impact, and every opportunity to lower our carbon emissions is an important step towards achieving this goal.

The innovative design uses substantially less woven polypropylene than traditional tunnel lift solutions while achieving the same reliable handling outcome, reducing material consumption and lowering the overall environmental footprint of the bag.
